

Mandie Morgan

Lead Technical Product Manager

Technical Discovery | Platform Modernization | Integration Strategy | AI-Enabled Product Delivery | Aubrey, TX | amanda01cj@icloud.com | mandiemorgan.dev

LEADERSHIP PROFILE

I solve complex product and integration problems by bringing design, engineering, architecture, and business partners together to define the real issue before teams commit to a solution. I use whiteboarding, system flows, API payloads, repository analysis, and AI-assisted investigation to challenge assumptions, uncover hidden requirements, and shape scalable technical strategies that improve engineering readiness and customer outcomes.

TECHNICAL PRODUCT FOCUS

DISCOVER	CONNECT	CHALLENGE	DELIVER
Whiteboard complex problems	Product, design & engineering	Assumptions, gaps & edge cases	Scalable solutions & outcomes

CORE CAPABILITIES

PRODUCT	DISCOVERY	SYSTEMS	TECHNICAL
Product Strategy	Problem Framing	Systems Thinking	AI-Assisted Repo Analysis
Roadmaps & Prioritization	Whiteboard Facilitation	Integration Strategy	APIs / Payloads / Data Flows
Customer Outcomes	Experience Design Partnership	Risk & Requirement Discovery	GitLab / CI/CD / AWS
Executive Influence	Cross-Functional Leadership	Platform Modernization	Figma / GitHub Copilot / LLMs

PROFESSIONAL EXPERIENCE

State Farm

Technical Product Owner Lead - Policy Administration System Platform Transformation

Aug 2025-Present

- Lead technical discovery across vendor engineers, internal developers, architects, QA, experience designers, and business stakeholders to define ambiguous problems and shape scalable Sales and Service integration strategies.
- Applied enterprise systems thinking to redirect a vendor-specific date-and-time change into a scalable cross-integrator strategy, using a temporary API-layer transformation to maintain delivery continuity while avoiding long-term custom code and integration inconsistencies.
- Use GitHub Copilot and LLMs to analyze production repositories, trace system behavior, validate requirements, and uncover hidden constraints, edge cases, and downstream impacts before engineering implementation.
- Shifted vendor delivery from end-of-feature handoff to incremental intake by analyzing code commits across multi-story capabilities, identifying completed work early, and advancing backlog readiness by 2-3 weeks to accelerate internal development.
- Partner daily with experience designers to review and approve Figma prototypes, ensuring customer journeys align with product intent, accessibility, technical feasibility, and integration constraints.
- Translate architecture, data flows, API payloads, repository findings, and solution tradeoffs into clear recommendations for engineers, product leaders, and executives.

State Farm

Horizontal Product Owner - Shopping Journey Auto

Dec 2022-Jul 2025

- Led delivery of the Simplified Auto Sales Agency experience, generating 2.5M quotes in 2024 while increasing quote starts 13%, completed quotes 17%, and purchases 53% versus the legacy sales platform.
- Built a multi-year product and engineering roadmap supporting platform modernization, state rollout, and scalable customer-experience enhancements through Q4 2027.
- Partnered with experience designers, architects, and senior engineers to define customer problems, influence solution design, simplify implementation, and reduce risk across critical integrations.
- Balanced customer needs, stakeholder priorities, technical debt, engineering capacity, and platform scalability to guide roadmap and backlog decisions.

State Farm

Portfolio Analyst - Auto Acquisition & Service

Feb 2022-Dec 2022

- Built a searchable engineering knowledge platform using MkDocs and CI/CD, reducing tribal knowledge and improving onboarding and technical self-service.
- Coordinated prioritization across multiple engineering teams, resolving 60+ cross-functional dependencies and improving sequencing, transparency, and delivery flow.

State Farm

Technology Supervisor / Technology Analyst - IT Operations

Apr 2018-Feb 2022

- Led a technical recruiting strategy that increased intern-to-full-time conversion from 46% to 92%, expanded the candidate pipeline by 70%, and reduced annual hiring costs by more than \$150K.
- Built an AWS-powered recruiting application that automated resume parsing, candidate scoring, and role matching, eliminating manual screening and improving hiring efficiency.

ENGINEERING & AI PROJECT

Engineering Analytics Platform | Personal Technical Project

- Designed a React-based engineering intelligence platform to analyze multiple GitLab repositories and surface delivery health, development activity, defect trends, and operational risks.
- Explored APIs, caching, persistence, and AI-assisted repository analysis to convert raw engineering activity into actionable insights for technical leaders.

COMMUNITY LEADERSHIP

ITSMF Emerge Academy (2025) | University of Dallas Recruiting Lead | Directed 25+ DFW hackathons engaging 7,000+ students

EDUCATION & CERTIFICATIONS

Millikin University | B.S., Information Systems & Accounting | May 2015
Certified ScrumMaster (CSM) | Scrum Alliance | Sep 2021
