

AMANDA MORGAN

SENIOR TECHNICAL PRODUCT STRATEGIST / LEAD TECHNICAL PRODUCT MANAGER

AUBREY, TX • amanda01cj@icloud.com • mandiemorgan.dev

I do my best work when requirements are gray, documentation is stale, integrations behave unexpectedly, and smart teams are stuck. I investigate reality, connect the systems, and create a room where people feel safe enough to challenge ideas—not each other.

HOW I CREATE CLARITY RESEARCH → DEFINE THE REAL PROBLEM → WHITEBOARD → ARCHITECTURE & EXPERIENCE → BUILD-READY STORIES → EMBEDDED DELIVERY → MEASURE

AT MY CORE

01

I'm comfortable saying "I don't know."

Then I research, ask better questions, and keep going until the system makes sense.

02

I believe the room is smarter than hierarchy.

The best solution emerges when engineers, designers, architects, operators, and business partners feel heard.

03

I challenge ideas because I care about people.

Healthy disagreement protects teams from preventable complexity and creates space for better long-term decisions.

SIGNATURE STRENGTHS

TECHNICAL DISCOVERY / SYSTEMS THINKING / PLATFORM STRATEGY / API & INTEGRATION DESIGN / AI-ASSISTED REPOSITORY ANALYSIS / BUSINESS ARCHITECTURE / FIGMA & EXPERIENCE DESIGN / EMPATHETIC INFLUENCE

EXPERIENCE

Technical Product Owner Lead — Policy Administration System Platform Transformation **AUG 2025–PRESENT**

STATE FARM • AUBREY, TX / HYBRID

- Redirected a vendor-specific date/time change into a scalable cross-integrator strategy, using a temporary API-layer transformation to maintain delivery continuity while avoiding long-term custom code and integration inconsistencies.
- Changed vendor delivery from end-of-feature handoff to incremental intake by analyzing code commits across multi-story capabilities, identifying completed work early, and advancing backlog readiness by 2–3 weeks.
- Use AI-assisted analysis of repositories, payloads, current functionality, business rules, dependency documentation, and experience designs to establish facts and uncover hidden constraints before solution decisions.
- Lead whiteboarding with senior engineers to define the real problem, separate facts from assumptions, test trade-offs, and translate complex integration behavior into clear product direction.
- Broke a cross-functional stalemate around a third-party lender API by connecting session-state management, integration behavior, and user needs: preserve lender data during edits, create a new lender code only when values change, and eliminate repeated data entry without changing the external API.
- Validate documentation and subject-matter assumptions against production behavior; present evidence collaboratively to drive defect creation, solution redesign, and more accurate technical documentation.
- Convert decisions into business architecture diagrams, end-to-end integration flows, system calls, data handoffs, Figma-aligned experiences, and build-ready stories—remaining embedded with engineers through development to resolve gaps and pragmatic trade-offs.
- Create decision clarity without forcing artificial consensus—pause at critical moments to level-set understanding, invite engineers' recommendations, surface unresolved gaps, and challenge assumptions with evidence while preserving trust.

Horizontal Product Owner — Shopping Journey Auto **DEC 2022–JUL 2025**

STATE FARM • AUBREY, TX / HYBRID

- Led the Simplified Auto Sales Agency UI, generating 2.5M quotes in 2024 and increasing quote starts 13%, completed quotes 17%, and purchases 53% versus the legacy sales platform.
- Built a product and engineering roadmap through Q4 2027, balancing customer needs, state rollout, platform scalability, technical debt, and capacity.
- Partnered with architects and senior engineers to shape integration solutions, simplify implementation, reduce delivery risk, and translate technical behavior into stakeholder decisions.

Portfolio Analyst — Auto Acquisition & Service **FEB 2022–DEC 2022**

STATE FARM • AUBREY, TX / HYBRID

- Built a searchable MkDocs knowledge platform with CI/CD; coordinated prioritization across engineering teams and resolved 60+ cross-functional dependencies; led the Agility-to-GitLab migration.

Technology Supervisor / Technology Analyst — IT Operations **APR 2018–FEB 2022**

STATE FARM • AUBREY, TX / HYBRID

- Raised intern-to-full-time conversion from 46% to 92%, expanded the candidate pipeline 70%, and reduced annual hiring costs by more than \$150K; also built an AWS-powered recruiting application for automated parsing, scoring, and role matching.

TECHNICAL PROJECT & LEADERSHIP

ENGINEERING ANALYTICS PLATFORM • Designed a React-based platform using GitLab APIs, caching, persistence, and AI-assisted analysis to surface delivery health, development activity, defects, and operational insights.

COMMUNITY • ITSMF Emerge Academy (2025) / University of Dallas Recruiting Lead / Directed 25+ DFW hackathons engaging 7,000+ students

EDUCATION & CERTIFICATION

MILLIKIN UNIVERSITY • B.S., Information Systems & Accounting, May 2015 **CERTIFIED SCRUMMASTER (CSM)** • Scrum Alliance, Sep 2021
